VICENTERRA

JURA SUISSE

2015

Each day, the sun appears in the morning and disappears at night. Planet Earth shows its sunlit face.

The moon displays its phases in a spatial way.

Complex mechanics make for the playful reading of Time ...

LUNA

The story behind VICENTERRA

The significant event in the birth of the VICENTERRA brand came in April 2010, with the idea of creating a timepiece by subscription sale, supported by photo-realistic images and 2 prototypes.

The first step in realizing this extraordinary feat was to find 100 people interested in the project. This took 7 months to accomplish.

The second part of the challenge was to produce the 100 limited series timepieces, in just 12 months.

VICENTERRA proved to be a human adventure, which, step by step, made its way around the world.

VICENTERRA LUNA

VICENTERRA
SWISS MADE 15

VICENTERRA LUNA Volume 1

Man has been fascinated by the Moon since the beginning of time. As Earth's perpetual counterpart, the Moon turns endlessly amongst the stars.

VICENTERRA LUNA sets a 3-dimensional stage for the moon, revealing each of its phases in a spatial manner, quarter by quarter. The earth indicates the geographical zone of the Sun at its zenith, or simply put, where it's noon on earth at any given time.

The magic of these two stars is complete with the rising and setting of the sun, which gives way to a magnificent starlit night.

The black dial shows applied hour markers accompanied by minute markers in stealth mode, four of which are represented by the name of the new model, «LUNA». Discreetly, this timepiece provides a rhythm to your days.

The deep black backdrop, hinting at infinity LUNA's complicated mechanisms amongst a spray of shining stars.
